4 must-have machining calculator apps

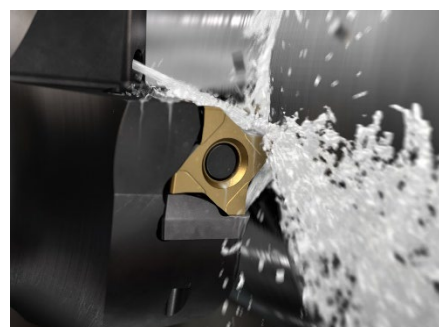

Small adjustments of parameters can have a big impact on the overall results. The machining calculator apps are designed to help engineers and operators optimize the performance of their turning, milling, drilling and tapping applications by calculating optimal cut settings based on job parameters.

Effective and high-quality turning

With its eight-edged insert, CoroTurn® 300 has better chip control and more stable performance. With fewer inserts needed, setup times are shortened especially when changing tool holders and inserts. This can ultimately save your time and money.
